Manufacturers & suppliers of prefabricated beam & Block Concrete Flooring system

Company information

Supa-Slab cc is a wholly owned South African firm of manufacturing, marketing, distribution and installation of the pre-cast concrete beam and block flooring system.

Nearly 12 years since opening, **Supa-Slab** is amongst the largest pre-cast concrete slab specialists in South Africa, producing high quality pre-cast concrete components for the suspended flooring industry. Providing a complete turnkey solution from detailed design development through skills-based manufacture to on-site erection using well-trained and competent installation teams.

Supa-Slab partners with professional engineers with vast experience in the pre-cast slab system. **Supa-slab** pre-cast solutions make a major contribution to the construction industry and leading developers in ensuring economical slab design, supplying quality products, providing efficient delivery with prompt and safe on-site installation, guarantying that every project gain maximum benefits through careful designing and planning, economical costing and excellent personal service.

Benefits

The **Supa-Slab** precast concrete Rib and Block suspended flooring system is the result of nearly fifty years of research and improvement in providing a successful alternative to the conventional suspended concrete slab system.

The strength of our knowledge and the experience we have within this market has resulted in the development of an excellent product to meet a growing need.

This innovative product allows the construction market to eliminate the need for conventional cumbersome insitu decking system. In addition the precast concrete or polystyrene blocks reduce the amount of insitu concrete required up to 50%. The speedy erection and completion ensures easy access to other trades and earlier occupation of completed building. Skilled labour is reduced considerably due to the simplicity of the system and ease of handling making ideal for the owner builder. The **Supa-Slab** Rib and block system, eliminating the requirement for cranes erection, has proven ideally suitable for commercial and industrial developments, schools, town houses, cluster homes and domestic homes. Due to the 50% reduction in weight over insitu slab, the Rib and Block system has resulted in substantial savings in the building design support structure, the transport and the erection, thus offering the client lucrative savings towards the overall price of his development.

Supa-Slab adheres to a strict Total Quality Management regime, which ensures quality products and services and repeated customer satisfaction.
